This model is intended for private/personal use only, it is not to be used for any commercial purposes. The ACF file, paint files, interior views, cockpit, and sounds all Copyright ©2006 Andrew Benzie.

## HISTORY

I have always loved trains, and I noticed that the wonderful X-Plane habitat is populated with planes of all shapes and sizes, an assortment of ground vehicles, and a handful of boats . . . but no trains.

The goal of this project was to create a working model of an electric railcar based on San Francisco Municipal Railway Car #1003. The original car (still operational today) was built by the St. Louis Car Company in 1939 as one of five cars for the Municipal Railway.

This resulting X-Train model includes an operational train controller, photo-realistic interior views, authentic sound effects, and opening doors to complete the sim-rail experience.

*san francisco municipal railway #1003  
on the city's historic market street f line*

*ride the rails of the x-plane world*

This product is the result of countless hours of research, design and construction – including a local train ride with a digital camera. I hope you enjoy your X-Train experience.

For more about SF Muni #1003, including how to take a ride, see: [www.wrm.org](http://www.wrm.org)

## FEATURES

- realistic body design and paint, lighting
- photo-realistic interior views
- custom engine, rail, bell and horn sounds
- custom cockpit with functioning controller
- operating side doors
- train operation manual included

X-Train SF Muni can be completely controlled with only a mouse. A flight yoke works great for steering. The horn can be accessed manually or use your flaps key. Doors are controlled via the speedbrakes.
