for X-Plane v8.50

AB Air Version 1.0
October 2006

Please Note: This vehicle is an updated and/or modified version of another author's original work. Please refer to the original README file (located within the same directory as this file, if available) for more information. I have obtained the original author's permission whenever necessary. I would like to sincerely thank the original author(s) for providing me a solid foundation on which to build; without their work this release would not be possible. This guide is not to be misconstrued as a reference for real-world applications.

HISTORY

This is a rebuild of the ZMC-2 by Mark Fisher and Heintz Dzuriowicz. Please see the ReadMe Original folder for more information.

An excellent design. I reworked the cockpit to be a bit more user friendly on this one, but not much else. It's really a lot of fun to fly. The engine detail is fantastic.

the zmc-2 preparing for its next voyage

*animated directional controls
enhance the sim flying experience*

WHAT'S NEW

- new exterior paint job/lighting
- rebuilt custom cockpit design with animated directional controls
- a few other tweaks here and there

A flight yoke works great for elevator and aileron control. If you have pedals set them control the rudder. Use the small wheels to control trim.
